MEASURES in student housing

**Housemate is getting tested**

- **Housemate with symptoms** will await the results in isolation.
- Other housemates and close contacts need to be extra aware for possible symptoms and need to be responsible with social contacts. You have been in contact with a potential Corona case after all!
- **Are you developing symptoms? Make a test appointment immediately!** Make sure you isolate yourself as a precaution!

**Housemate is tested positive**

- The housemate who has tested positive stays in isolation.
- Other housemates and close contacts need to go into quarantine at home and have as little contact as possible. Always keep 1.5 m distance!
- Make a Corona toilet and shower!
- **Are you not developing any symptoms within the quarantine period? Don’t do a test!**

---

**Quarantine at home**

- Stay at home for 10 days. This period starts just after your last contact with a person that tested positive.
- You can’t go outside.
- Ask other people to do groceries for you.
- You can sit in your garden or on your balcony.
- You can’t have people coming over unless it is for medical purposes. (For example, a doctor, GGD.)

**Isolation**

- At least 7 days in isolation. This starts with the first day or being sick. If you recover from your symptoms, you need to stay in isolation for another 7 days. After this, you can go outside again.
- You can’t leave your room.
- Get other people to do groceries for you.
- You can’t have people coming over unless it is for medical purposes. (For example, a doctor, GGD.)

**Test when?**

- **No symptoms** → Don’t test!
- Recovered from your symptoms → Don’t test!
- **(Mild) symptoms** → Test!
