

LERU STudent REseArch Mobility Programme (STREAM)
Project proposal

Host University:
Università degli studi di Milano

Field:
Medicine

Specified field, subject:
Obstetrical clinical researches

Research project title:
Maternal hemodynamics in normal Pregnancy and in hypertensive disorders of pregnancy

Possible starting month(s):

Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug
				x	x						

Possible duration in months:

1	2	3	4	5	6
					x

Suitable for students in: 2nd cycle (Master students)

Prerequisites: Appropriate behavioural skills for obstetrical clinical environment

Restrictions: none

Description:

Maternal cardiovascular assessment during normal and affected pregnancies is a new approach to Hypertensive disorders of pregnancy (HDP). The objective of this project is to disentangle the different components that in pregnancy might affect the endothelial function and hence the cardiovascular performance: different placental diseases, maternal metabolic syndrome, food low grade inflammation, intestinal dysbiosis.
