Operating instructions for condenser tumble dryer
T 8402 C

To avoid the risk of accidents or damage to the appliance it is essential to read these instructions before it is installed and used for the first time.
Caring for the environment

Disposal of the packing material

The transport and protective packing has been selected from materials which are environmentally friendly for disposal and can normally be recycled.

Ensure that any plastic wrappings, bags etc. are disposed of safely and kept out of the reach of babies and young children. Danger of suffocation!

Rather than just throwing these materials away, please ensure they are offered for recycling.

Disposal of your old appliance

Electrical and electronic appliances often contain materials which, if handled or disposed of incorrectly, could be potentially hazardous to human health and to the environment. They are, however, essential for the correct functioning of your appliance. Please do not therefore dispose of your appliance with your household waste.

Energy saving tips

To avoid unnecessarily long drying times and high consumption of energy:

– Make sure that your laundry is thoroughly spun before drying. The higher the spin, the greater the savings that can be made in energy and time during drying.

– Load according to the optimum amount of laundry recommended for the programme being used (see Programme chart).

Underloading is uneconomical. Overloading gives a poorer quality of drying and may cause unnecessary creasing.

– Make sure the room in which the dryer is located is well ventilated.

– Make sure the fluff filters are clean before using the dryer.

– Check the condenser unit from time to time and clean it when necessary.

Please dispose of it at your local community waste collection / recycling centre and ensure that it presents no danger to children while being stored for disposal.

This tumble dryer conforms to current safety requirements. Inappropriate use can, however, lead to personal injury and damage to property.

To avoid the risk of accidents and damage to the tumble dryer, please read these instructions carefully before using it for the first time. They contain important information on its safety, installation, use and maintenance.

Keep these instructions in a safe place and ensure that new users are familiar with the content. Pass them on to any future owner.

Correct application

This tumble dryer is only intended for drying fabrics which have been washed in a water solution, and marked on the manufacturer’s care label as being suitable for tumble drying. "Dry cleaning kits" for freshening up garments in a tumble dryer are increasingly available on the market. If using, do so at your own risk, and follow the instructions provided on the packaging.

Any other applications may be dangerous. Miele cannot be held liable for damage resulting from incorrect or improper use or operation.

This tumble dryer is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience or knowledge, unless they are supervised whilst using it, or have been shown how to use it by a person responsible for their safety.

Safety with children

Keep children away from the tumble dryer at all times. It is not a toy! To avoid the risk of injury do not allow them to play on or near it or to play with its controls. Supervise children whilst you are using it.

Older children may only use it if its operation has been clearly explained to them, and they are able to use it safely, recognising the dangers of incorrect use.

Technical safety

Before setting up the tumble dryer, check it for any externally visible damage. Do not install or use a damaged tumble dryer.

Before connecting the tumble dryer, ensure that the connection data on the data plate (voltage and connected load) match the mains electricity supply. If in any doubt, consult a qualified electrician.
The electrical safety of this tumble dryer can only be guaranteed when continuity is complete between it and an effective earthing system which complies with current local and national safety regulations. It is most important that this basic safety requirement is present and regularly tested, and where there is any doubt the household wiring system should be inspected by a qualified electrician. Miele cannot be held liable for the consequences of an inadequate earthing system (e.g. electric shock).

Do not connect the tumble dryer to the mains electricity supply by an extension lead. Extension leads do not guarantee the required safety of the machine (e.g. danger of overheating).

Unauthorised repairs could result in unforeseen dangers for the user, for which Miele cannot accept liability. Repairs should only be undertaken by a Miele approved service technician. Ensure current is not supplied to the machine until after maintenance or repair work has been carried out.

Faulty components must only be replaced by genuine Miele original spare parts. Only when these parts are fitted can the safety standards of the machine be guaranteed.

If the connection cable is faulty it must only be replaced by a Miele approved service technician to protect the user from danger.

In the event of a fault or for cleaning purposes, the tumble dryer is only completely isolated from the electricity supply when:
- it is switched off at the wall socket and the plug is withdrawn, or
- it is switched off at the mains, or
- the mains fuse has been withdrawn, or the screw-out fuse removed (in countries where this is applicable).

This tumble dryer may only be used in mobile installations such as ships if a risk assessment of the installation has been carried out by a suitably qualified engineer.

In countries where there are areas which may be subject to infestation by cockroaches or other vermin, pay particular attention to keeping the appliance and its surroundings in a clean condition at all times. Any damage which may be caused by cockroaches or other vermin will not be covered by the guarantee.

Correct use

Do not let anyone sit or lean on the door, as this can cause the tumble dryer to tip up.

Always close the door after use. This way you will avoid the danger of:
- children climbing onto or into the dryer or hiding things in it.
- pets or other small animals climbing into it.
Warning and Safety instructions

- The dryer must not be used without the fluff filters in place or if the fluff filters are damaged in any way.
- The dryer must not be used without the condenser unit in place.
- The fluff filters must be thoroughly dried after cleaning. Damp or wet filters could cause operational faults.
- Do not install the tumble dryer in a room where there is a risk of frost occurring. At temperatures around freezing point the tumble dryer may not be able to operate properly. There is a risk of damage if the condensed water is allowed to freeze in the pump, hoses and / or condensed water container. The ambient room temperature should be between +2°C and +35°C.
- If the water is drained externally through the drain hose instead of being collected in the condensed water container, make sure the drain hose is securely attached if you hang it in a sink or basin to avoid the hose slipping and the water causing damage.
- Condensed water is not drinking water. It can cause health problems in both people and animals.
- Always keep the area around the tumble dryer free of dust and fluff. Dust drawn into the machine can over time cause blockages in the condenser unit.
To prevent the risk of fire, the following textiles must not be dried in this tumble dryer:

- fabrics which contain a large proportion of rubber, foam rubber or rubber-like materials.

- items which contain damaged padding or fillings (e.g. pillows and jackets). If the filling comes out it could ignite and cause a fire.

- items which have been treated with inflammable cleaning agents.

- items which have been splashed with hair lacquer, hair spray, nail varnish remover or similar substances.

- items soiled with wax or other chemicals (e.g. mops and floor cloths).

- items, such as workwear, which have not been thoroughly cleaned and which are still soiled with grease, oil or other deposits (such as cosmetics, lotions etc).

If items have not been thoroughly cleaned there is a danger that these might ignite when heated, even after they have been removed from the dryer at the end of the programme. When washing such heavily soiled items ensure that you use sufficient detergent and select a high temperature. If in doubt, wash the items several times.

Accessories

Accessory parts may only be fitted when expressly approved by Miele. If non-Miele parts are used, guarantee, performance and product liability claims may be invalidated.

Miele cannot be held liable for damage caused by non-compliance with these Warning and Safety instructions.
1. **Programme selector**
   The programme selector can be turned clockwise or anti-clockwise.

2. **Programme sequence** and **check lamps**

3. **Start button**
   Press the Start button to start a programme. The Start indicator lamp will flash as soon as a programme can be started. It lights up constantly once the programme has started.

4. **I-On/0-Off button**
   To switch the appliance on or off / to interrupt a programme.
   The Finish/Anti-crease lamp will light up as confirmation that the tumble dryer has been switched on.

5. **Door Button**
   To open the door / to cancel a programme.
   Pressing this button will open the door even when the appliance is switched off at the mains.
   If the appliance is switched on at the mains and the door is opened the drum lighting will come on. It will go out a few minutes later to save energy.
Notes on laundry care

Care symbols

Before drying check the drying symbol on the care label. If there are no symbols, dry at your own risk!

- . . . . . . . . . . . Dry at normal temperature
- . . . . . . . . . . . Dry at a low temperature
- . . . . . . . . . . . Do not tumble dry

- For delicates and fabrics with the following care label ☑ select Low temperature.

Tips on drying

- Always observe the maximum recommended loads given in the "Programme chart". Never overload the drum.

Overloading can cause unnecessary wear and tear to the laundry, give a disappointing drying result and cause more creasing.

- Do not put soaking wet items into the tumble dryer. Spin them thoroughly after washing using the appropriate spin speed.

- Use the Automatic programme for drying mixed loads of cottons and minimum iron fabrics.

- Open jackets so that they can dry evenly.

- Woollens and wool blends tend to become matted and shrink if dried in a tumble dryer. They can, however, be partially dried using the Woollens handcare programme.

- Down-filled garments have linings which have a tendency to shrink, depending on the quality of the item. They can be partially dried using the Smoothing programme.

- Pure linen should only be machine dried if specified as suitable by the manufacturer on the care label, as the surface of the fabric may otherwise become rough. They can be partially dried using the Smoothing programme.

- Loopknit garments (e.g. T-shirts and underwear) tend to shrink depending on their quality. Do not over-dry these textiles. When purchasing these garments it is advisable to take their shrinkage properties into account.

- Minimum iron fabrics and 100% cotton shirts or blouses tend to crease more, the greater the load. This is especially true of very fine weaves. Reduce the load or use the Minimum iron - Hand iron programme.

- Starched laundry can be dried in the tumble dryer. To achieve the usual finish, double the amount of starch should be used.

- New dark coloured garments should be washed and dried separately from light coloured garments to avoid the danger of colours running and discolouring other garments or even plastic components in the appliance. Dark coloured fibres can also settle on light coloured garments and vice versa.
How to dry correctly

Brief instructions

The headings numbered (1, 2, 3 ...) show the operating sequence and can be used as a brief guide to using your dryer.

Sort the laundry

To ensure an even drying result separate out the washed laundry and sort it according to:

- the drying level required
- the type of fibre or weave
- size
- the moisture content after spinning.

Make sure that objects e.g. detergent dispensing balls have been removed from the laundry. They could melt, and cause damage to the dryer or the laundry.

- Check seams and stitching to ensure that padding and linings are intact.
- Fasten duvet covers and pillow cases to prevent small items from being trapped inside them.
- Fasten hooks and eyes etc.
- Tie fabric belts and apron strings.
- Sew in or remove underwiring from bras.

Turn on the tumble dryer

Switch the dryer on by pressing the I-On/0-Off button in.

The tumble dryer may be switched on after loading, saving energy as the light will not come on.

Load the tumble dryer

- Press the Door button to open the door.
- Load the laundry loosely into the drum.

Do not overload the drum. See the "Programme chart" for recommended loads for each programme. Overloading can cause unnecessary wear and tear to the laundry and give a disappointing drying result.

- Before closing the door make sure the fluff filter is correctly positioned.

Check the laundry is right inside the drum so that it cannot get trapped or damaged when the door is shut.

- Shut the door either with a gentle swing, or lean against it and push it shut.
How to dry correctly

4 Select a programme

- Turn the programme selector to the required programme.

Low temperature

- For drying particularly sensitive fabrics (care symbol 🍰) e.g. acrylics turn the programme selector to the Low temperature position.

Because the heater rating is reduced for the Low temperature setting clothes dry more slowly thus lengthening drying times.

5 Start the programme

- Press the Start button.

The indicator lamp for the Start button will then change from flashing to being on constantly.

The drying cycle begins.

Depending on the programme selected, the drying stage reached is shown by the sequence indicator lamps on the right hand side of the control panel.

Before the end of a programme

The cooling down phase takes place before the end of a programme so that the garments are not too hot to handle (the Cool air indicator lamp will come on). The programme is not finished until the cooling down phase is complete.

The Woolens handcare and Smoothing programmes do not include a cooling down phase.

At the end of a programme

The Finish/Anti-crease indicator lamp comes on.

The drum will continue to rotate at intervals to prevent laundry creasing, if you do not wish to remove it immediately. The anti-crease phase lasts for an hour. There is no anti-crease phase on the Woolens handcare programme.

During the anti-crease phase . . . . . . . (depending on the programme selected) the indicator lamp for the drying stage reached will also light up. . . . the buzzer will sound at intervals.
6. Remove the laundry

- Press the Door button.
- Open the door.
- Remove the laundry.

Check that all items have been removed from the drum. If items are left in the dryer, they could be damaged by overdrying when the dryer is next used.

- Switch the dryer off by pressing the On/Off button.
- Clean the fluff filters.
- Close the door.
- Empty the condensed water container (unless the dryer has been connected for external drainage).

Changing the programme sequence

Changing a programme while it is running

You cannot change to another programme once a programme has started (this prevents unintentional alterations).

If you try and change a programme the Finish/Anti-crease lamp will start flashing.

You will need to cancel the current programme before you can select a new one.

Cancelling a programme

- Turn the programme selector to Finish.
- You can select a different programme when the Finish/Anti-crease indicator lamp comes on.

Interrupting a programme

- Switch the dryer off.

To continue drying

- Switch the dryer on.

The programme will continue, as long as the cooling down phase has not been reached.

Adding or removing laundry after a programme has started

- Press the Door button.
- Open the door.

⚠️ Do not touch the back of the drum when adding or removing items. The drum could be very hot - danger of burning.

- Add or remove items as required.
- Close the door.
- Press the Start button.
## Programme chart

<table>
<thead>
<tr>
<th><strong>Cottons</strong></th>
<th>Max. load: 6 kg*</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Normal+, Normal</strong>, <strong>Low temperature</strong></td>
<td></td>

* Weight of dry laundry
Cleaning and care

Emptying the condensed water container

The condensed water will be collected in the condensed water container unless the tumble dryer has been fitted with a drain hose (see installation).

The condensed water container should be emptied after every drying cycle or as soon as the Empty out container indicator lamp comes on.

The drying programme will be interrupted if the maximum level of the condensed water container is reached. The Empty out container indicator lamp comes on and the buzzer sounds.

- Open the shutter and empty out the water.
- To replace the container hold it at a slight angle (as when removing it) and push it in gently until you feel it click into position.
- Before starting a new programme, first switch the tumble dryer off and then on again. The Empty out container indicator lamp will go out.

Condensed water should not be consumed. It could lead to health problems for people and animals.

Condensed water can be put to household use (e.g. used in a steam iron or humidifier). To ensure that any residual particles of fluff in the condensed water are removed before use, pass it through a fine sieve or paper filter first.

- Grip the container firmly with both hands, as shown, and pull it out slightly towards the right-hand side.
- Hold the container with both hands and carry it in a horizontal position.
Cleaning the fluff filters
The fluff which is created by the drying process is collected by the fluff filters in the door and the door opening. Clean the filters after each drying programme.

Cleaning them whilst dry
Tip: You can also use a vacuum cleaner.

- Open the door and pull the fluff filter (1) out of the door as illustrated.
- Use your fingers to remove the fluff from the surface of the filter.
- Remove any fluff from the hollow part of the door holder. A cleaning brush is available as an optional extra from your Miele dealer or the Miele Spare Parts Department, or use a vacuum cleaner.
- Once clean, push the filter back into the door holder until it clicks into position. Ensure it is facing the correct way.
- Also clean the door seal (2) with a damp cloth.
- Use your fingers to remove the fluff from the two fluff filters in the door opening.
- Close the door.
Cleaning and care

Cleaning them with water

If there is a great deal of compacted fluff on any of the filters, they can be removed and cleaned under hot running water.

- Open the door and pull the fluff filter out of the door as described previously.

The two filters in the door opening can also be removed if you need to clean them with water.

- Turn dial ① and pull the filter by the dial out of the door opening as shown ②. Do the same on the other side.

- Rinse all the filters under hot, running water.

- Then shake the filters until no more water droplets are visible.

- Dry the filters thoroughly with care.

- Clean the area underneath these filters, e.g. with a vacuum cleaner.

⚠️ Do not replace them if they are damp or wet. Damp or wet filters could cause operational faults.

- Push the large filter back into the door holder until it clicks into position. Ensure it is facing the correct way.

- Replace the filters in the door opening by first inserting them at the bottom and then pressing them into place at the top.

- Lock both dials.
Cleaning the tumble dryer

Disconnect the tumble dryer from the mains electricity supply.

- Clean the housing and control panel with a slightly damp cloth and a mild detergent or soapy water.
- The drum and other stainless steel parts can be cleaned with a suitable proprietary stainless steel cleaner following the manufacturer's instructions.

Do not use solvents, abrasive cleaners, glass cleaners or all-purpose cleaners. These could damage plastic surfaces and other parts. The tumble dryer must never be hosed down.

- Dry all parts with a soft cloth.
- A microfibre E-Cloth is available from the Miele UK Spare Parts Department which is suitable for cleaning surfaces such as stainless steel, glass, plastic and chrome without the use of chemicals. It can be washed 300 times.
Cleaning and care

Cleaning the condenser unit

Detergent residue, hair and fine fluff from the dryer can get through the fluff filters and block the condenser unit.

Dust from the room in which the dryer is installed can also get into the condenser unit and cause a blockage.

**Check** the condenser unit at least twice a year. If the dryer is used frequently then clean the condenser unit after approx. 100 drying cycles.

Removing the condenser unit

- Open the service panel. The hooks at the side will prevent the panel from falling off.
- Now remove the panel by pulling it diagonally upwards.
- Then place it to one side.
- Turn the lever on the inner cover downwards to the vertical position.
- Pull the cover forwards
- Then remove it by pulling it diagonally upwards.
- Turn the lever on the condenser unit to the vertical position.
Pull the condenser unit out of its housing by the handle.

Checking the condenser unit

Hold the condenser unit up to the light as shown.

Check to see if there is any fluff inside it. The arrows in the illustration above indicate where to look.

If you cannot see any fluff:
- Replace the condenser unit (see following page).

If you can see some fluff:
- Clean the condenser unit as described below.

Cleaning the condenser unit

- When rinsing the condenser unit, make sure you position it as shown in the next two illustrations.

Use a shower head or similar to rinse the unit out as shown.
Cleaning and care

Replacing the condenser unit

- With the handle facing upwards, push the condenser unit back into position in its housing.
- Turn the lever down to the horizontal position, making sure that the hook on the lever clicks into the groove.

When replacing the inner cover after cleaning, ensure that the rubber seal fits correctly into the groove.

- Replace the inner cover making sure the hooks locate correctly. Hold it at an angle and push it gently downwards.
- Then turn the lever upwards into the horizontal position to lock the cover.
- Replace the service panel and press the upper edge until it clicks into position.

⚠️ It is important to ensure that both the condenser unit and the cover are correctly positioned and locked otherwise water may leak from the dryer.

- Then flush the unit through from the front.
- Check the condenser unit again for any visible fluff and if necessary flush it through again until it has all gone.
- Remove any soiling still visible inside the housing unit by hand using a damp cloth. Do not try and access areas you cannot reach by hand!
- Also make sure the rubber seals are clean.

The rubber seals must not be removed and must be free of kinks.

22
With the help of the following notes minor faults in the performance of the appliance, some of which may result from incorrect operation, can be put right without contacting the Service Department.

⚠ Repair work to electrical appliances should only be carried out by a suitably qualified person in strict accordance with current local and national safety regulations. Repairs and other work by unqualified persons could be dangerous. The manufacturer cannot be held liable for unauthorised work.

### General problems

<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The tumble dryer fails to start when switched on.</td>
<td>No obvious cause.</td>
<td>– Have you followed the switch-on procedure correctly (see “How to dry correctly”)?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– Is the plug correctly inserted in the socket and switched on?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– Is the door closed properly?</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– Has the fuse or circuit breaker tripped?</td>
</tr>
<tr>
<td>Items made of synthetic fibres are charged with static electricity after drying.</td>
<td>Synthetic fibres tend to attract static charge.</td>
<td>Static charge can be reduced by adding a fabric conditioner to the final rinse in the washing machine or a fabric conditioner sheet to the load in the dryer.</td>
</tr>
</tbody>
</table>
## Problem solving guide

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>There is a build-up of fluff.</strong></td>
<td>- Fluff is principally the result of friction when garments are being worn and washed. Machine drying hardly causes any fluff to form and has been established by research institutes to have no appreciable effect on the lifetime of fabric.</td>
<td>- Fluff is collected by the fluff filters and can be easily removed (see &quot;Cleaning and care&quot;).</td>
</tr>
<tr>
<td><strong>The laundry is not sufficiently dry.</strong></td>
<td>- The load consisted of different fabrics.</td>
<td>- Finish drying using the Warm air programme. - Select a more suitable drying programme next time (see &quot;Programme chart&quot;).</td>
</tr>
<tr>
<td><strong>Water leaks from the tumble dryer after the condenser unit has been cleaned.</strong></td>
<td>- The inner cover of the condenser unit has not been locked properly and/or the condenser unit has not been positioned correctly. - Fluff has collected in the condenser unit housing.</td>
<td>- Ensure that the condenser unit is positioned correctly and lock the inner cover. - Check the rubber seals. - Use a cloth to remove any visible fluff from the inside of the condenser unit housing.</td>
</tr>
<tr>
<td><strong>The interior drum lighting does not come on.</strong></td>
<td>- The lighting switches off automatically (to save energy).</td>
<td>- Switch the dryer off and then on again.</td>
</tr>
<tr>
<td></td>
<td>The lamp needs changing.</td>
<td>Change the lamp as described at the end of this section.</td>
</tr>
<tr>
<td>Problem</td>
<td>Possible cause</td>
<td>Remedy</td>
</tr>
<tr>
<td>---------</td>
<td>---------------</td>
<td>--------</td>
</tr>
</tbody>
</table>
| Drying is taking too long, or the programme has been cancelled | The dryer is not working efficiently or economically*. The most likely cause is a build-up of fluff, hair or detergent residue on the fluff filters. | – Remove any fluff, hair or residual detergents.  
– Rinse the filters if necessary and then dry them thoroughly before replacing them.  
If not thoroughly dry faults will occur.  
– If the above measures do not remedy the problem follow the advice below. |
| | Ventilation to and from the dryer may be insufficient (e.g because it is installed in a small room). This has caused the temperature in the room to rise sharply. | – Open a door or window while the tumble dryer is in operation for increased air flow. |
| | The vents below the door are blocked. | – Remove any objects that are blocking the vents. |
| | Detergent residues, hair and fine fibres can block the condenser unit. | – Check the condenser unit from time to time and clean it if necessary (see "Cleaning and Care"). |
| | The laundry has not been spun sufficiently. | – Make sure that your laundry is thoroughly spun at the appropriate spin speed. |
| | The tumble dryer has been overloaded. | – Do not exceed the maximum load for the programme selected. |
| | Metallic components, e.g. zips have prevented the dryer from registering the correct moisture level in the laundry. | – Open zips next time.  
– If the problem occurs again, dry garments with long zips using "Warm air" (timed drying). |

* Before attempting to remedy the problem:  
– Open and close the door.  
– Switch the dryer off and then on again to start a programme.
## Problem solving guide

### Check and fault messages

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| **The Empty out container indicator lamp comes on.** | The condensed water container is full or there is kink in the drain hose. | – Empty out the condensed water container.  
– Check the drain hose.  
– The indicator lamp will go out if you switch the dryer off and then back on again. |
| **The programme stops and the Machine iron or Hand iron indicator lamp flashes. The buzzer sounds.** | No obvious cause. | – Switch the dryer off and then on again.  
– Then start the programme again.  
If the programme stops again and the indicator lamp flashes again there is a fault. Contact the Miele Service Department. |
| **The Finish/Anti-crease indicator lamp flashes while drying is in progress.** | The programme selector was moved after the start of a programme. The programme continues to run as normal. | Turn the selector back to the original position and the indicator lamp will go out. |
| **The programme stops and the Finish/Anti-crease indicator lamp comes on. The buzzer sounds.** | This is not a fault. The electronic unit has recognised that there is no laundry in the drum and cancelled the programme. Drying individual garments or items which are already dry can also cause the programme to be cancelled. | Use the Warm air programme (timed drying) to dry individual items. Before changing a programme: Open and close the door. |
| **The Cool air indicator lamp comes on and a continuous alarm sounds.** | The dryer is not working efficiently or economically. | See the previous page under "Drying is taking too long ...". |
Changing the lamp

Disconnect the tumble dryer from the mains electricity supply.

Open the door.
You will find the interior lamp cover at the top of the drum aperture.

- Insert a suitable tool, such as a wide bladed screwdriver, under the side edge of the lamp cover as illustrated.

- Apply a little pressure and whilst doing so turn your wrist in the direction of the arrow to open the cover.

The cover will open downwards.

The temperature resistant lamp should only be ordered from your Miele Dealer or the Miele Spare Parts Department.

The lamp specification and maximum wattage is stated on the data plate and on the lamp cover.

Replace the lamp.

To close the cover push it upwards and press it on the left and right until you hear it click into position.

Ensure that it is fitted into position securely, as any moisture could cause a short circuit.
In the event of any faults which you cannot remedy yourself, or if the appliance is under guarantee, please contact

– your Miele dealer or
– the Miele Service Department (see back cover for contact details).

When contacting your dealer or the Service Department, please quote the model and serial number of your appliance, both of which are shown on the data plate situated on the right hand side below the drum aperture.

Future updates (PC)

The indicator or check light marked PC on the fascia panel is the interface used by the Miele service technicians during service work for testing purposes and for updating the appliance’s programme data.

Appliance guarantee

Please see the guarantee card supplied with your appliance.

Optional accessories

Optional accessories for this dryer are available from your Miele Dealer or from the Miele Spare Parts Department.

Please note that telephone calls may be monitored and recorded for training purposes.
Front view

1. Mains connection cable
2. Condensed water container
3. Control panel
4. Door
5. Service panel for condenser unit
6. Four height-adjustable screw feet
7. External drainage options (e.g. via wash basin, wash basin drain outlet, or gully).
Installation

Rear view

1. Protruding lid for holding when moving the appliance (see arrows)
2. Air inlet vent for cooling the condenser unit
3. Mains connection cable
4. External drainage of the condensed water
5. Accessories for connection to a sink drain outlet

Installation site

Make sure the dryer door can be opened without hindrance after installation.

Transporting the tumble dryer to its installation site

When moving the appliance, you can hold it by the lid where it protrudes to the rear of the dryer. To manoeuvre the dryer out of its packing case to its installation site you will also need to hold it by the front feet. Do not lift the appliance by the drum door.

Building under a continuous worktop / in a kitchen run

A building-under kit* with a coverplate to replace the appliance lid is required. It must be fitted by a suitably qualified person to ensure electrical safety.

N.B. If you wish to push your appliance under a worktop and there is space to do this without removing the lid the building under kit is not necessary. Otherwise the building under kit is essential.

- The building-under kit is supplied with its own installation instructions.
- N.B. When built under drying times may be longer.
- The electrical socket must be located in an accessible position near the tumble dryer.

With niche heights of:
- 830-840 mm, longer screw feet* are required.
- 870-885 / 915-930 mm, one or two raising kits* are required.

* accessory available to order.

Replacing the lid

If the lid has been removed in order to fit a coverplate, ensure that, if the lid is ever replaced, it fits securely into the rear holders. Otherwise, it is not properly secure for transport.
Levelling the tumble dryer

The appliance must be perfectly level to ensure safe and proper operation.

The screw feet can be adjusted to compensate for any unevenness in the floor.

- The air inlet and outlet vents on the front of the tumble dryer must not be covered as this would prevent sufficient ventilation for cooling the condenser unit.

Room in which the dryer is located

Air taken in for use in the drying process will be warm when it is expelled from the front of the dryer. This expelled air heats up the air in the room. It is therefore very important to ensure that the room is adequately ventilated, particularly if the dryer is located in a small room. Otherwise running times and energy consumption could be increased.

Washer-dryer stack

The tumble dryer can also be combined with a Miele washing machine in a washer-dryer stack. The appropriate "WTV" stacking kit (available to order) to match your dryer is required.

⚠ Stacking kits must only be installed by a suitably qualified fitter.

Before moving the tumble dryer again (e.g. when moving house)

After each use a small quantity of condensed water will collect in the area around the pump. This water can run out if the tumble dryer is tipped up when it is being moved. It is a good idea to run the Cool air programme for approximately 1 minute before moving the tumble dryer. Any remaining condensed water will then be fed into the condensed water container or out through the drain hose.
External condensed water outlet

General notes
When drying is in progress, condensed water is pumped into the condensed water container through the drain hose at the back of the dryer. The condensed water can also be drained off directly if the tumble dryer is installed near a sink, drain outlet etc. so that the condensed water container does not have to be emptied.

Drain hose length ............ 1.50 m
Maximum delivery head ....... 1.50 m
Maximum drain hose length .... 4.00 m

If the on-site water drainage system is not fitted with a non-return valve or an appropriate air gap, one must be fitted to prevent the risk of back-flow. (See "Installation conditions requiring a non-return valve").

The following optional accessories are available:
- an extension hose
- a non-return valve kit for connection to an external condensed water outlet (includes an extension hose). Maximum delivery head with non-return valve fitted: 1.00 m

Arranging the drain hose

Do not pull on the drain hose and do not stretch it or allow it to become kinked as it could get damaged.

There will be a small amount of residual water in the drain hose. Have a container ready to collect this.

Pull the hose off its connection (see arrow).

Allow any residual water to run into the container.

Unwind the hose and pull it carefully out of the holders.

Position the hose to the right or left hand side as necessary.

Leave the hose in the middle holder to prevent it from becoming kinked inadvertently.
**External drainage via a sink or gully**

- See "Front view" illustration.

⚠️ If you want to drain the water off into a sink you will need to secure the hose carefully, e.g. by tying it to a tap to make sure it cannot slip during use. Otherwise there is a risk of overflowing water which could cause damage.

- Use the bow-shaped guide to prevent the drain hose from becoming kinked.

**Installation conditions requiring a non-return valve**

⚠️ Certain installation conditions require the fitting of a non-return valve (available as an optional accessory). A non-return valve will prevent the risk of back-flow out of the dryer which could cause damage.

A non-return valve is required:

- If the tumble dryer is connected to a sink drain outlet (see the following section).

- If the tumble dryer is connected to a drainage system **already in use** by another appliance, e.g. a dishwasher or washing machine.

**Example: Connection to a sink drain outlet**

The drain hose with non-return valve fitted can be connected directly to a suitable sink drain outlet.

- Remove the following from the back of the dryer at the top:
  Adapter 1 and hose clip 3 behind it.
Installation

1 Adapter
2 Nut
3 Hose clip
4 End of the hose
5 Non-return valve
6 Tumble dryer drain hose

- Fit adapter 1 to the sink drain outlet using nut 2. If this nut has a flat disc in it you should take the disc out first.
- Attach the end of the hose 4 to adapter 1.
- Use a screwdriver to tighten hose clip 3 up close to the nut.

⚠️ Non-return valve 5 has to be fitted with the arrow pointing in the direction of flow (i.e. towards the sink). Otherwise water will not drain out of the machine.

- Fit non-return valve 5 to the tumble dryer drain hose 6 (make sure it is fitted in the correct direction (see arrow on non-return valve)).
- Secure the non-return valve using hose clips.
Electrical connection U.K.

All electrical work should be carried out by a suitably qualified and competent person, in strict accordance with current national and local safety regulations (BS 7671 in the UK).

Ensure power is not supplied to the appliance until after installation work has been carried out.

The appliance is supplied with a mains cable with moulded plug ready for connection to a 230-240V mains supply. Please ensure the connection data quoted on the data plate match the household mains supply.

Connection should be made via a suitable switched socket which is easily accessible after installation.

For extra safety it is advisable to install a residual current device (RCD), with a trip current of 30 mA (in accordance with DIN VDE 0664, VDE 0100 Section 739).

Do not connect via an extension lead. Extension leads do not guarantee the required safety of the appliance (e.g. danger of overheating).

Non-rewireable plugs BS 1363

The fuse cover must be refitted when changing the fuse, and if the fuse cover is lost, the plug must not be used until a suitable replacement is obtained. The colour of the correct replacement cover is that of the coloured insert in the base of the plug, or the colour that is embossed in words on the base of the plug (as applicable to the design of plug fitted).

Replacement fuses should be ASTA approved to BS 1362 and have the correct rating. Replacement fuses and fuse covers may be purchased from your local electrical supplier.

WARNING: THIS APPLIANCE MUST BE EARTHED

* Weight of dry laundry

** EN 61121:2005 test programme

All data without a "star" against it was calculated using EN 61121:2005.

Before testing in accordance with EN 61121, dry a 3 kg load of cotton laundry with 70% residual moisture as per the above standard using the Cottons Normal programme.

Consumption data can vary from the nominal values given above depending on the size of the load, type of textiles, residual moisture levels after spinning and fluctuations in the electricity supply.

Programmable functions for changing default settings

The programmable functions are used to alter the tumble dryer’s electronics to suit changing requirements. Programmable functions can be altered at any time.
Altering the residual moisture level in the Cottons programmes

The tumble dryer is designed to dry effectively using as little energy as possible. However, if you require the laundry to be drier, it is possible to reduce the default residual moisture level in the Cottons programmes. Please note that programme durations will be longer if this option is activated.

Follow steps 1 to 7 to programme and store in memory.

Before you begin, first ensure that:
- The tumble dryer is switched off.
- The door is closed.
- The programme selector is at Finish.

1 Press the Start button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on with the I-On/0-Off button.

3 Wait until the Start indicator lamp lights up constantly . . .

4 . . . and then release the Start button.

5 Turn the programme selector to the Cottons Normal position.

6 Pressing the Start button switches between activating and deactivating the drier setting.

- If the Drying indicator lamp is flashing: the drier setting is activated

- If the Drying indicator lamp is not flashing, the drier setting is not activated and the residual moisture level is on the standard default setting.

Whilst doing this, the Cool air indicator lamp will flash twice.

7 Switch the appliance off with the I-On/0-Off button.

The setting you have selected is now stored in memory. You can change it again at any time.

To check:

■ Make sure the dryer is switched off, the door is closed and the programme selector is at Finish and then carry out steps 1 to 5.

The Drying indicator lamp will show you if the drier setting has been selected.

■ Switch off the dryer.

The check is complete.
Programmable functions

Altering the residual moisture level in the Minimum iron programmes

The tumble dryer is designed to dry effectively using as little energy as possible. However, if you require the laundry to be drier, it is possible to reduce the default residual moisture level in the Minimum iron programmes. Please note that programme durations will be longer if this option is activated.

Follow steps A to G to programme and store in memory.

Before you begin, first ensure that:
- The tumble dryer is switched off.
- The door is closed.
- The programme selector is at Finish.

1. Press the Start button and keep it pressed in whilst carrying out steps 2 - 3.
2. Switch the dryer on with the I-On/0-Off button.
3. Wait until the Start indicator lamp lights up constantly . . .
4. . . . and then release the Start button.
5. Turn the programme selector to the Cottons Low temperature position.
6. Pressing the Start button switches between activating and deactivating the drier setting.
   - If the Drying indicator lamp is flashing, the drier setting is activated.
   - If the Drying indicator lamp is not flashing, the drier setting is not activated and the residual moisture level is on the standard default setting.

Whilst doing this, the Cool air indicator lamp will flash three times.

7. Switch the appliance off with the I-On/0-Off button.

The setting you have selected is now stored in memory. You can change it again at any time.

To check:
- Make sure the dryer is switched off, the door is closed and the programme selector is at Finish and then carry out steps 1 to 5.

The Drying indicator lamp will show you if the drier setting has been selected.

- Switch off the dryer.

The check is complete.
Activating and deactivating the buzzer

A buzzer sounds (at intervals for a maximum of 1 hr) to let you know the programme has finished.

The tumble dryer is delivered with the buzzer activated but you can deactivate it if wished.

The buzzer will still sound if there is a fault, even if it has been deactivated.

Follow steps 1 to 7 to programme and store in memory.

Before you begin, first ensure that:
– The tumble dryer is switched off.
– The door is closed.
– The programme selector is at Finish.

1 Press the Start button and keep it pressed in whilst carrying out steps 2 - 3.
2 Switch the dryer on with the I-On/0-Off button.
3 Wait until the Start indicator lamp lights up constantly . . .
4 . . . and then release the Start button.
5 Turn the programme selector to the Cottons Hand iron position.

6 Pressing the Start button switches between activating and deactivating the buzzer.
   – If the Drying indicator lamp is not flashing:
     the buzzer is deactivated
   – If the Drying indicator lamp is flashing:
     the buzzer is activated

Whilst doing this, the Cool air indicator lamp will flash four times.

7 Switch the appliance off with the I-On/0-Off button.

The setting you have selected is now stored in memory. You can change it again at any time.

To check:

Make sure the dryer is switched off, the door is closed and the programme selector is at Finish and then carry out steps 1 to 5.

The Drying indicator lamp will show you if the buzzer is activated.

Switch off the dryer.

The check is complete.
Extending the cooling down time

The cooling down phase which takes place before the end of a programme can be lengthened if required. This makes the garments easier to handle.

The dryer is delivered with the extended cooling down time option deactivated. You can extend the cooling down time by 5 minutes or 10 minutes.

The option of extending the cooling down time is available with the Cottons, Minimum iron and Automatic programmes.

Follow steps 1 to 7 to programme and store in memory.

Before you begin, first ensure that:
– The tumble dryer is switched off.
– The door is closed.
– The programme selector is at Finish.

1. Press the Start button and keep it pressed in whilst carrying out steps 2 - 3.

2. Switch the dryer on with the I-On/0-Off button.

3. Wait until the Start indicator lamp lights up constantly . . .

4. . . . and then release the Start button.

5. Turn the programme selector to the Cottons Machine iron position.

6. Pressing the Start button alters the cooling down time.

   – If the Drying indicator lamp flashes once:
     The cooling down time will be five minutes longer.

   – If the Drying indicator lamp flashes twice:
     The cooling down time will be ten minutes longer.

   – If the Drying indicator lamp is not flashing:
     The cooling down time is not extended.

Whilst doing this, the Cool air indicator lamp will flash five times.

7. Switch the appliance off with the I-On/0-Off button.

The setting you have selected is now stored in memory. You can change it again at any time.

To check:

■ Make sure the dryer is switched off, the door is closed and the programme selector is at Finish and then carry out steps 1 to 5.

The Drying indicator lamp will show you if the cooling down time has been extended.

■ Switch off the dryer.

The check is complete.
Anti-crease

If laundry is not removed as soon as the programme has finished, the drum will continue to rotate at intervals for one hour to prevent creasing.

The anti-crease function

– is activated when the tumble dryer is delivered. You can deactivate it if wished.

– is present on all programmes except Woollens handcare.

– should be left activated, if laundry is not normally removed immediately after the end of a programme.

Follow steps 1 to 7 to programme and store in memory.

Before you begin, first ensure that:

– The tumble dryer is switched off.
– The door is closed.
– The programme selector is at Finish.

1 Press the Start button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on with the I-On/0-Off button.

3 Wait until the Start indicator lamp lights up constantly . . .

4 . . . and then release the Start button.

5 Turn the programme selector to the Minimum iron Low temperature position.

6 Pressing the Start button switches between activating and deactivating this setting.

– If the Drying indicator lamp is not flashing:

   Anti-crease is deactivated

– If the Drying indicator lamp is flashing:

   Anti-crease is activated

(Factory default setting)

Whilst doing this the Cool air indicator lamp will flash on and off, alternating with 1 long and 1 short flash.

7 Switch the appliance off with the I-On/0-Off button.

The setting you have selected is now stored in memory. You can change it again at any time.

To check:

■ Make sure the dryer is switched off, the door is closed and the programme selector is at Finish and then carry out steps 1 to 5.

The Drying indicator lamp will show you which setting has been programmed.

■ Switch the dryer off.

The check is complete.
Changing the standard drying level in the Minimum iron - Normal programme

The drying level for this programme is set at a standard level. You have the option of changing this to an increased drying level.

The tumble dryer is delivered with the drying level set at Normal

You can change this to Normal+ (drier than the standard drying level).

Important: the "Normal+" drying level will work in addition to the "Altering the residual moisture level in the Minimum iron programmes" programmable function, if you have already set this.

Follow steps 1 to 7 to programme and store in memory.

Before you begin, first ensure that:

– The tumble dryer is switched off.
– The door is closed.
– The programme selector is at Finish.

1 Press the Start button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on with the I-On/0-Off button.

3 Wait until the Start indicator lamp lights up constantly . . .

4 . . . and then release the Start button.

5 Turn the programme selector to Minimum iron - Normal.

6 Pressing the Start button alters the drying level.

– If the Drying indicator lamp is flashing: the standard drying level is Normal+

– If the Drying indicator lamp is not flashing, the increased drying level is not activated and the drying level will remain on the standard setting (Normal).

Whilst doing this, the Cool air indicator lamp will flash on and off, alternating with 1 long flash and 2 short flashes.

7 Switch the appliance off with the I-On/0-Off button.

The setting you have selected is now stored in memory. You can change it again at any time.

To check:

■ Make sure the dryer is switched off, the door is closed and the programme selector is at Finish and then carry out steps 1 to 5.

The Drying indicator lamp will show you if the Normal+ drying level has been set.

■ Switch off the dryer.

The check is complete.
Changing the standard drying level in the Automatic programme

The drying level for this programme is set at a standard level. You have the option of changing this to an increased drying level.

The dryer is delivered with the drying level set at Normal

You can change this to Hand iron (damper) or Normal+ (drier than the standard drying level).

Follow steps 1 to 7 to programme and store in memory.

Before you begin, first ensure that:

- The tumble dryer is switched off.
- The door is closed.
- The programme selector is at Finish.

1 Press the Start button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on with the I-On/0-Off button.

3 Wait until the Start indicator lamp lights up constantly . . .

4 . . . and then release the Start button.

5 Turn the programme selector to the Automatic position.

6 Pressing the Start button alters the drying level.
- If the Drying indicator lamp flashes twice: the standard drying level is Normal+
- If the Drying indicator lamp is not flashing: the standard drying level is Hand iron
- If the Drying indicator lamp flashes once, the drying level has not been changed and will remain on the standard setting (Normal).

Whilst doing this, the Cool air indicator lamp will flash on and off, alternating with 1 long flash and 3 short flashes.

7 Switch the appliance off with the I-On/0-Off button.

The setting you have selected is now stored in memory. You can change it again at any time.

To check:

- Make sure the dryer is switched off, the door is closed and the programme selector is at Finish and then carry out steps 1 to 5.

The Drying indicator lamp will show you if the drying level has been changed.
- Switch off the dryer.

The check is complete.
