Suitable for students in: Bachelor level Master level

Prerequisites:
BSc level knowledge of (bio)medical sciences, preferably with introductory knowledge in toxicology and epidemiology

Description:
IRAS (Institute for Risk Assessment Sciences) performs research in the field of toxicology, environmental epidemiology and exposure assessment. Within this institute a wide range of environmental agents are being studied, and their risks for humans and the environment are being assessed. Factors vary from chemical agents, e.g. endocrine disruptors, neurotoxic substances and mixtures in air pollution, biological agents such as endotoxins and zoonoses, to physical agents like electromagnetic fields. A specific research project can be defined together with the student based on his/her background and interests.
